

Statement of Volatility – Dell E1715S

CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

The Dell E1715S contains both volatile and non-volatile (NV) components. Volatile components lose their data immediately after power is removed from the component. Non-volatile (NV) components continue to retain their data even after power is removed from the component. The following NV components are present on the E1715S system board.

Table 1. (List of Non) Volatile Components on System Board

Description	Reference Designator	Volatility Description	Use Accessible for External Data	Remedial Action - Action necessary to prevent loss of data.
System BIOS	(1)*	Non-Volatile Serial Flash memory, 1-bit.	No	System BIOS is write protected
System EEPROM	(2)*	Non-Volatile memory, 1/0bit.	Yes	System EEPROM is write protected
V34 ED5D EEPROM	(3)*	Non-Volatile memory, + 0bit.	No	System EEPROM is write protected

CAUTION: All other components on the system board lose data if power is removed from the system. Primary battery loss results in the loss of code and information in the battery. Secondary battery loss results in the loss of information in the system board coin cell battery. Secondary battery loss results in the loss of information in the system configuration (date and time) of day information.
