

AXIS M4317-PLVE Panoramic Camera

6 MP dome with 360° view and deep learning

With a 6 MP sensor, this discreet mini dome offers excellent image quality and a complete 180° or 360° overview. Featuring a stereographic lens and Sharpdome 360, it delivers greater sharpness at the edges of the image. Built-in IR illumination with individually controllable LEDs ensures clear, re ection-free footage and excellent image quality even in low light or complete darkness. A deep learning processing unit enables unique opportunities for analytics based on deep learning. Plus, AXIS Object Analytics can detect and classify humans, vehicles, and types of vehicles. Furthermore, Axis Edge Vault protects your Axis device ID and simplifies authorization of Axis devices on your network.

- > Complete 180° and 360° overview
- > Built-in IR with individual IR LEDs
- > Support for deep learning analytics
- > Built-in cybersecurity features
- > Digital roll for ease of installation

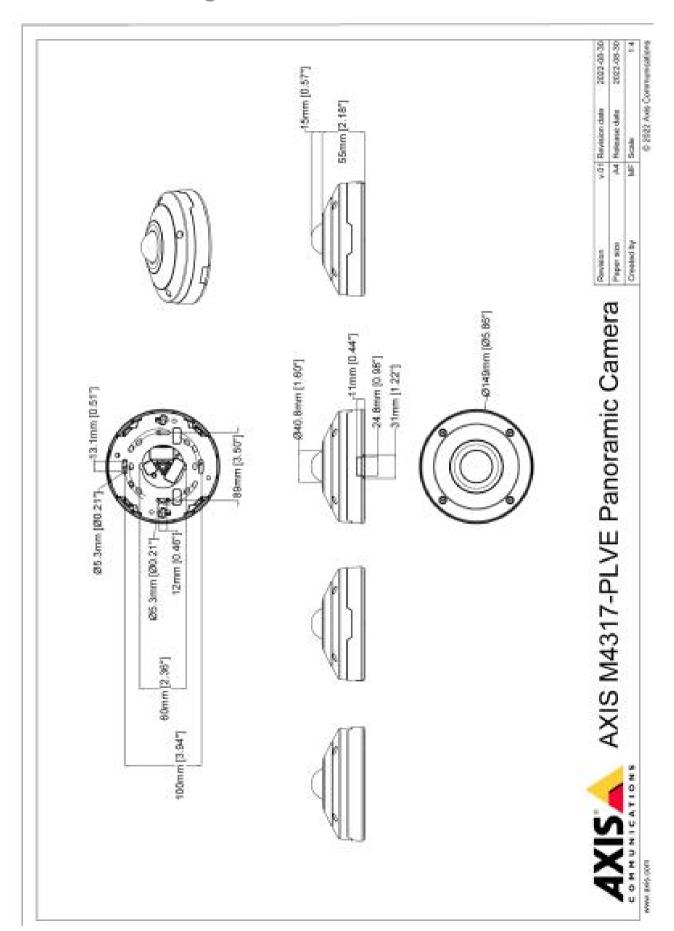

AXIS M4317-PLVE Panoramic Camera

Camera	444.0%		One-click cloud connection ONVIF® Pro le G, ONVIF® Pro le M, ONVIF® Pro le S, and	
Image sensor	1/1.8" progressive scan RGB CMOS		ONVIF® Pro le T, speci cation at <i>onvif.org</i>	
Lens	Focal length: 1.1 mm, F2.2 Horizontal eld of view: 182°		Support for Session Initiation Protocol (SIP) for integration with	
	Vertical eld of view: 182°		Voice over IP (VoIP) systems, peer to peer or integrated with SIP/PBX.	
	Fixed iris, IR corrected, xed focus	Video	Compatible with AXIS Companion, AXIS Camera Station, video	
Day and night	Automatic IR-cut Iter	management	management software from Axis' Application Development	
Minimum illumination	Color: 0.16 lux at 50 IRE, F2.2	systems	Partners available at axis.com/vms

Key features and technologies

AXIS Object Analytics

AXIS Object Analytics is a preinstalled, multifeatured video analytics that detects and classi es humans, vehicles, and types of vehicles. Thanks to Al-based algorithms and behavioral conditions, it analyzes the scene and their spatial behavior within – all tailored to your speci c needs. Scalable and edge-based, it requires minimum effort to set up and supports various scenarios running simultaneously.

Axis Edge Vault

Axis Edge Vault is the hardware-based cybersecurity platform that safeguards the Axis device. It offers features to guarantee the device's identity and integrity and to protect your sensitive information from unauthorized access.

Establishing the root of trust starts at the device's boot process. In Axis devices, the hardware-based mechanism **secure boot** veri es the operating system (AXIS OS) that the device is booting from. AXIS OS, in turn, is cryptographically signed (**signed rmware**) during the build process. Secure boot and signed rmware tie into each other and ensure that the rmware has not been tampered with during the lifecycle of the device and that the device only boots from authorized rmware. This creates an unbroken chain of cryptographically validated software for the chain of trust that all secure operations depend on.

From a security aspect, the **secure keystore** is the critical building-block for protecting cryptographic information used for secure communication (IEEE 802.1X, HTTPS, Axis device ID, access control keys etc..) against malicious extraction in the event of a security breach. The secure keystore is provided through a Common Criteria and/or FIPS 140 certi ed hardware-based cryptographic computing module. Depending on security requirements, an Axis device can have either one or multiple such modules, like a TPM 2.0 (Trusted Platform Module) or a secure element, and/or a system-on-chip (SoC) embedded Trusted Execution Environment (TEE).

Signed video ensures that video evidence can be veri ed as untampered without proving the chain of custody of the

video le. Each camera uses its unique video signing key, which is securely stored in the secure keystore, to add a signature into the video stream. This allows video to be traced back to the Axis camera from where it originated, so it's possible to verify that the footage has not been tampered with after it left the camera.

To read more about Axis Edge Vault, go to axis.com/solutions/edge-vault.

Light nder

The Axis Light nder technology delivers high-resolution, full-color video with a minimum of motion blur even in near darkness. Because it strips away noise, Light nder makes dark areas in a scene visible and captures details in very low light. Cameras with Light nder discern color in low light better than the human eye. In surveillance, color may be the critical factor to identify a person, an object, or a vehicle.

OptimizedIR

Axis OptimizedIR provides a unique and powerful combination of camera intelligence and sophisticated LED technology, resulting in our most advanced camera-integrated IR solutions for complete darkness. In our pan-tilt-zoom (PTZ) cameras with OptimizedIR, the IR beam automatically adapts and becomes wider or narrower as the camera zooms in and out to make sure that the entire eld of view is always evenly illuminated.

Zipstream

The Axis Zipstream technology preserves all the important forensic in the video stream while lowering bandwidth and storage requirements by an average of 50%. Zipstream also includes three intelligent algorithms, which ensure that relevant forensic information is identified, recorded, and sent in full resolution and frame rate.
