Backpack Hi-Vis 32 - 38 litres - yellow

Maximum visibility, work safety and storage space for outdoor use

Safety at work comes first – accidents can be avoided with the right equipment. The EN ISO 20471:2013 standard guarantees optimal visibility for employees in work clothing. You can also safely and conveniently transport work equipment such as spare clothing, helmets, gloves and personal items for outdoor jobs that span several days.

With its high-visibility backpacks, DICOTA offers a reliable solution for challenging work days outdoors. All products meet important procurement criteria, including ergonomics, durability and sustainability. The highest level of quality and functionality meets sustainable materials made from recycled PET bottles – protecting both employees and the environment.

The use of fluorescent fabrics and 3M reflective strips in line with EN ISO 20471:2013 means the backpacks offer excellent visibility, thus improving safety at work in outdoor areas like construction sites and forests and for rescue operations as well as on the way to work. The outer material is water-repellent, certified under EN ISO 4920, Level 4, and the rain cover supplied provides additional protection for heavy downpours. The air-flow system on the back guarantees pleasant air circulation when temperatures rise. The adjustable hip and chest straps ensure comfortable weight distribution and the best ergonomics.

With plenty of storage space, the backpack is perfectly designed for outdoor use. It can be expanded from 32 to 38 litres, so offers plenty of room for a change of clothes or work clothes. These can be stored separately from the rest of the contents. The notebook is fully protected with the tried-and-tested fit-all system. There are also compartments for tablet, smartphone, power bank, torch, etc., as well as universal zipped compartments. Valuables can be safely stored in the compartment on the back to prevent theft. A business card pocket and the velcro area on the back allow you to personalise the backpack with a name or logo patch.

The backpack Hi-Vis 32 – 38 litres offers maximum space, comfort and visibility and is perfect for a demanding day working outdoors. It also improves safety at work while helping to prevent accidents.
