Flashing: Total power supply $\geq 63\text{ W}$
Off: Total power supply $< 56\text{ W}$
For TL-SG1210MP:
On: $116\text{ W} \leq \text{Total power supply} < 123\text{ W}$
Flashing: Total power supply $\geq 123\text{ W}$
Off: Total power supply $< 116\text{ W}$

Package Contents: Switch, Power Adapter, Power Cord and Installation Guide.
 Note: For simplicity, we will take TL-SG1008P for example throughout the Guide.

Connection

Note:

1. TL-SG1210P/TL-SG1210MP has two uplink ports, which typically connect to uplink devices like routers. Uplink 1 is an SFP port and works with a 1000 Mbps SFP module. Uplink 2 is an RJ45 port.
2. PoE ports typically connect to PoE Devices. Besides, PoE ports can also connect to non-PoE devices, but only transmit data.
3. For TL-SG1008P, maximum PoE power is 30 W for each PoE port and 64 W for all PoE ports in total.
 For TL-SG1210P, maximum PoE power is 30 W for each PoE port and 63 W for all PoE ports in total.
 For TL-SG1210MP, maximum PoE power is 30 W for each PoE port and 123 W for all PoE ports in total.

PoE Disclaimer:

PoE budget calculations are based on laboratory testing. Actual PoE power budget is not guaranteed and will vary as a result of client limitations and environmental factors.

Frequently Asked Questions (FAQ)

Q1. Why is the Power LED not lit?

The Power LED should be lit when the power system is working normally. If the Power LED is not lit, please try the following:

A1: Make sure the AC power cord is connected to the switch with power source properly.

A2: Make sure the voltage of the power supply meets the requirements of the input voltage of the switch.

A3: Make sure the power source is on.

Q2. Why is the Link/Act LED not lit while a device is connected to the corresponding port?

Please try the following:

A1: Make sure that the cable connectors are firmly plugged into the switch and the device.

A2: Make sure the connected device is turned on and works normally.

A3: The cable must be less than 100 meters long (328 feet).

Q3. Why is PoE/PoE+ Port not supplying power for PoE devices?

If total power consumption of connected PoE devices exceeds the maximum, the system will cut off the power to ports with the lowest PoE priority. A PoE port with a smaller index number has a higher PoE priority.

Take TL-SG1008P as an example. If port 1, 2 and 4 are consuming 15.4 W respectively, and an additional PoE device with 19 W is connected to port 3, the total power consumption exceeds 64 W, so the system will cut off the power to port 4.
