

## Statement of Volatility – Dell WD19/WD19TB/WD19DC

 **CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

The Dell WD19/WD19TB/WD19DC contains both volatile and non-volatile (NV) components. Volatile components lose their data immediately after power is removed from the component. Non-volatile (NV) components continue to retain their data even after power is removed from the component. The following NV components are present on the WD19/WD19TB/WD19DC system board.

**Table 1. List of Non-Volatile Components on System Board**

Description	Reference Designator	Volatility Description	User Accessible for external data	Remedial Action (Action necessary to prevent loss of data)
EC SPI ROM	UE1	Non Volatile memory 128KB Flash. Store EC program code to control GPIO & communication with TI ACE via I2C interface	No	NA
USB Gen1/Gen2 Hub ROM	UI1, UI4	Non Volatile memory 2M bit. Stores USB Hub FW.	No	NA
DP Hub SPI ROM	UV1	Non Volatile memory 4M bit. Stores DP Hub FW.	No	NA
Intel Titan Ridge SPI ROM	U2	Non Volatile memory 8M bit. Stores Intel Alpine Ridge FW.	No	NA

 **CAUTION:** All other components on the system board lose data if power is removed from the system. Primary power loss (unplugging the power cord and removing the battery) destroys all user data on the memory.
