

IE300 Series

Industrial Ethernet, Layer 3 Switches

Our ruggedized IE300 Industrial Ethernet switches are built for enduring performance in harsh environments, such as those found in manufacturing, transportation and physical security. Offering high throughput, rich functionality and advanced security features, IE300 switches deliver the performance and reliability demanded by industrial deployments in the Internet of Things (IoT) age.

Overview

The IE300 Series are wirespeed Layer 3 switches for industrial Ethernet applications. With a wide operating temperature range of between -40°C and 75°C, they tolerate harsh and demanding environments, such as those found in industrial and outdoor deployment.

Device management is provided via Web GUI, SNMP, Telnet, SSH, or Allied Telesis Management Framework™ (AMF). AMF is unique to Allied Telesis managed devices, offering simplified device provisioning, recovery and firmware upgrade management.

Performance

The IE300 Series of high performance and cost-effective managed switches meets the high reliability requirements of industrial network operations. These robust switches provide network managers with several key features, using the simple web-based management function, including port-based VLANs, IEEE 802.1p, QoS, port trunking/link aggregation, port mirroring, priority queues, and IEEE 802.1x security support. With support for up to 16K MAC addresses, the IE300 Series is the ideal option for integrating management into any network solution.

Securing the Network Edge

To ensure data protection, it is important to control network access. Protocols such as IEEE 802.1x port-based authentication guarantee that only known users are connected to the network. Unknown users who physically connect can be segregated into a pre-determined part of the network, offering network guests such benefits as Internet access, while ensuring the integrity of private network data.

Gigabit and Fast Ethernet Support

The IE300 Series SFP ports support both Gigabit and Fast Ethernet Small Form-Factor Pluggables (SFPs). This makes IE300 Series switches ideal for environments where Gigabit fiber switches will be phased in over time. This allows for connectivity to the legacy 100FX hardware until it is upgraded to Gigabit Ethernet.

Support for both speeds of SFPs allows organizations to stay within budget as they migrate to faster technologies.

High Network Resiliency

The IE300 Series supports highly stable and reliable network switching with a recovery time within 50ms. You can customize the IE300 with the most appropriate mechanism and protocol to prevent network connection failure. Choices include Allied Telesis Ethernet Protection Switched Ring (EPSRing™), and the standard ITU-T G.8032.

Configurable Power Budget

On the AT-IE300-12GP, you can configure the overall power budget and the power feeding limit on a per-port basis, to establish a close relationship between the power sourcing feature with the real capabilities of the external Power Supply Unit (PSU).*

* Power supply must be compliant with local/national safety and electrical code requirements. Select the supply with the most appropriated output power derating curve.

Key Features

- IEEE 802.3at PoE+ sourcing (30W)
- Hi-PoE sourcing (60W)
- High Availability Network Power (HANP) to retain PoE sourcing on hot-restart
- AlliedWare Plus™ functionalities
- Allied Telesis Management Framework™ (AMF) node
- USB port for image/configuration backup, restore, and upgrade
- Redundant power inputs for higher system reliability
- ACLs for traffic management
- Ethernet Protection Switched Ring (EPSRing™)
- Ethernet Ring Protection Switching (ITU-T G.8032)
- STP, RSTP, MSTP, and EPSR for better redundancy
- Superior security including SSL, SSH, 802.1X, MAC, IP filtering, RADIUS, TACACS+, and VLAN for access protection
- IPv6 management for up-to-date requirements
- Reliable and accurate QoS support
- Internal DC/DC electrical isolation
- Static routes
- Equal Cost Multi Path (ECMP) routing
- Route redistribution (OSPF, RIP)
- Static unicast and multicast routes for IPv4
- Active Fiber Monitoring™

Key Details

Allied Telesis Management Framework (AMF)

Allied Telesis Management Framework (AMF) is a sophisticated suite of management tools that provide a simplified approach to network management. Powerful features like centralized management, auto-backup, auto-upgrade, auto-provisioning and auto-recovery enable plug-and-play networking and zero-touch management.

Any IE300 Series switch can operate as the AMF network master, storing firmware and configuration backups for other network nodes. The AMF master enables auto-provisioning and auto-upgrade by providing appropriate files to new network members. New network devices can be pre-provisioned, making installation easy because no on-site configuration is required.

AMF Guestnode allows Allied Telesis wireless access points and switching products, as well as third party devices such as IP phones and security cameras, to be part of an AMF network.

Loop Protection

Thrash limiting, also known as rapid MAC movement, detects and resolves network loops. It is highly user-configurable—from the rate of looping traffic to the type of action the switch should take when it detects a loop.

With thrash limiting, the switch only detects a loop when a storm has occurred, which can potentially cause disruption to the network. To avoid this, loop detection works in conjunction with thrash limiting to send special Loop Detection Frame (LDF) packets that the switch listens for. If a port receives an LDF packet, you can choose to disable the port, disable the link, or send an SNMP trap. This feature can help to detect loops before a network storm occurs, avoiding the risk and inconvenience of traffic disruption.

Open Shortest Path First (OSPFv3)

OSPF is a scalable and adaptive routing protocol for IP networks. The addition of OSPFv3 adds support for IPv6 and further strengthens the Allied Telesis focus on next generation networking.

Active Fiber Monitoring

Active Fiber Monitoring prevents eavesdropping on fiber communications by monitoring received optical power. If an intrusion is detected, the link can be automatically shut down, or an operator alert can be sent.

Tri-authentication

Authentication options on the IE300 Series also include alternatives to IEEE 802.1x port-based authentication, such as web authentication, to enable guest access and MAC authentication for endpoints that do not have an IEEE 802.1x supplicant. All three authentication methods—IEEE 802.1x, MAC-based and Web-based—can be enabled simultaneously on the same port for tri-authentication.

Voice VLAN

Voice VLAN automatically separates voice and data traffic into two different VLANs. This automatic separation places delay-sensitive traffic into a voice- dedicated VLAN, which simplifies QoS configurations.

Manageability

BOOTP/DHCP and TFTP/FTP/SCP firmware upgrade; Command Line Interface (CLI); Web Graphical User Interface (GUI); SNMPv1/v2c/v3; hardware monitor for power supply presence and thermal; CPU protection by hardware watchdog.

High Availability

EPSRing and ITU-T G.8032 for ring and chain topologies; Spanning-Tree protocol compatible; RSTP; MSTP; static Link Aggregation Group (LAG) and dynamic Link Aggregation Control Protocol (LACP) support.

Diagnostic

LED indicators for power input, contact relays, and PoE+ abnormal operations; SNMP trap; alarm mail; Link Layer Discovery Protocol (LLDP); port mirror; and LLDP Media Endpoint Discovery (LLDP-MED) support.

VLAN

802.1Q VLAN; VLAN assignment based on per port; MAC; double tagging (Q-in-Q) for provider backbone network; GARP VLAN Registration Protocol (GVRP); Link Aggregation.

Quality of Service (QoS)

Strict priority scheduling; 802.1p remarking; DSCP-to-CoS mapping; Weighted Round Robin.

Traffic filtering

Static MAC filtering; Access Control List (ACL) filtering based on Ethernet or IP header, protected ports based on MAC.

Security

802.1X port-based authentication; auto IP-MAC; AAA (Authentication, Authorization, and Accounting) support; secure channel by SSL/SSH; SFTP (secure FTP).

Multicast

IGMPv2/v3 snooping; MLDv1/v2 snooping.

PoE, PoE+ and Hi-PoE

IE300 is a Power over Ethernet PoE Power Sourcing Device (PoE PSD) which is compliant with IEEE802.3af, IEEE802.3at standards. Each port provides either 15.40W PoE with 12.95W available to the powered device (IEEE802.3af, IEEE802.3at Type 1), or 30.00W PoE+ with 25.50W available to the powered device (IEEE802.3at Type 2). Four ports are configurable for Hi-PoE (also known as Ultra PoE, High PoE, PoE+, and others because there is no current standard), which uses all four pairs in the cable to provide up to 60W—double the capacity of PoE+. Practical use is to support PTZ cameras with heater/blowers for outdoor application, enhanced infrared lighting, lighting controller and LED lighting fixtures, Remote Point of Sale (POS) kiosks, network switches, as well as other devices.

IE300 allows the configuration of the overall power budget and the power feeding limit on port basis; that establishes a close relationship between power sourcing feature with the real capabilities of the external PSU.

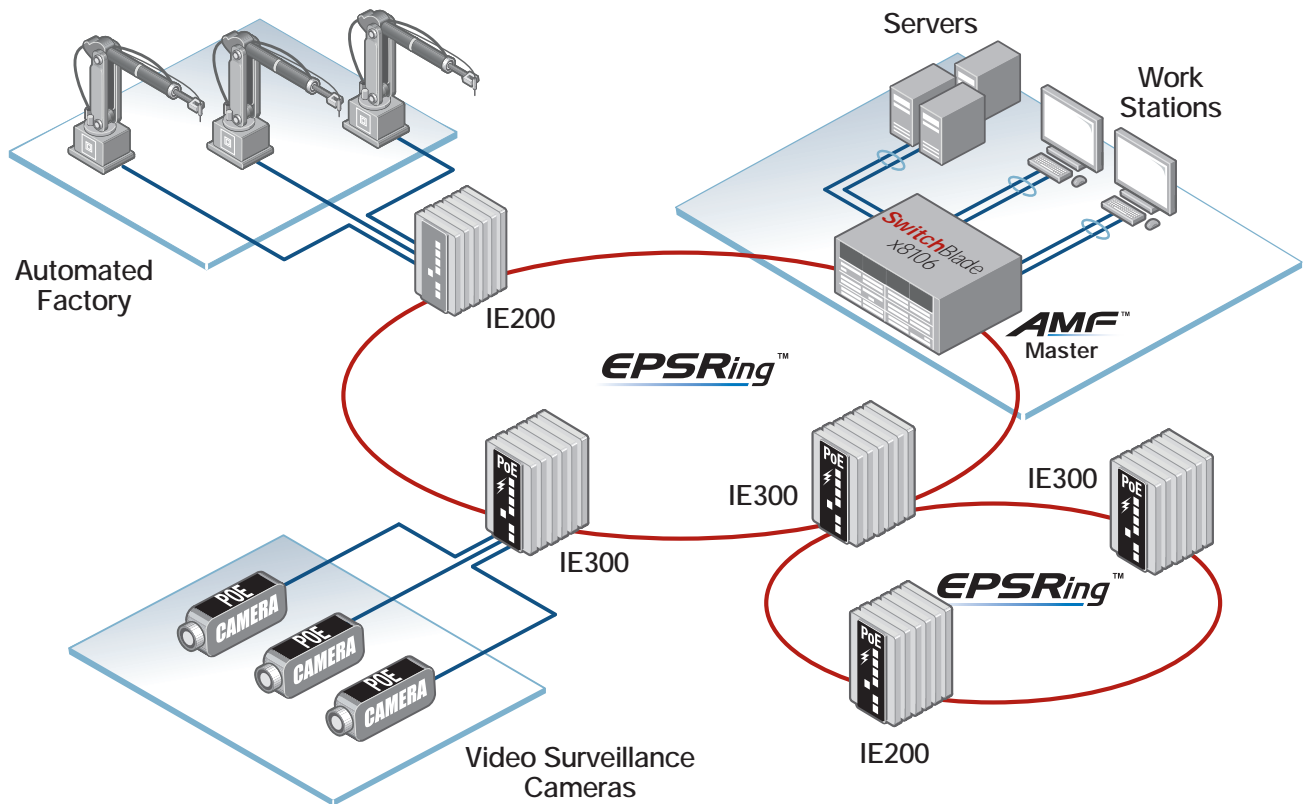

Others

DHCP client/server; TACACS+; Simple Network Time Protocol (SNTP); Domain Name Service (DNS); DHCP snooping/relay.

premium software License

By default, the IE300 Series offers a comprehensive Layer 2 and basic Layer 3 feature set that includes static routing and IPv6 management features. The feature set can easily be elevated premium software license.

Key Solutions

Ethernet Protection Switched Ring (EPSRing™) provides high speed resilient ring connectivity. This diagram shows the IE Series in a double ring network topology, serving different domains.

The IE Series operates at a large -40°C to $+75^{\circ}\text{C}$ temperature range and allows deployment in outdoor and harsh industrial environments.

PoE models feed 30 Watts per port and support remotely controlled pan, tilt and zoom (PTZ) video cameras.

The IE300 can source up to 60 Watts on four ports. The Hi-PoE utilizes all four pairs in the cable to provide power and expands the range of devices that can be added to the network, such as PTZ cameras with a heater/blower, enhanced infrared lighting, POS terminals, and thin client computer.

Management can be automated with the Allied Telesis Management Framework™ (AMF).

Specifications

MAC address	16K entries
Switching Bandwidth	24Gbps
Forwarding rate	17.8Mpps (64-byte packets)
Packet Buffer	1.5 MBytes (12.2 Gbits)
Priority Queues	8
Simultaneous VLANs	4K
VLANs ID range	1 – 4094
Jumbo frames	9KB jumbo packets
Multicast groups	1K (layer 2), 256 (layer 3)

Interface

I/O port	Gigabit Ethernet 10/100/1000T
Console port	RJ-45
F/W backup port	USB
Power connection	Terminal block

Power Characteristics

Voltage	12–55V DC (non-PoE models) 48V DC (PoE models, feeding 802.3at Type 1) 55V DC (PoE models, feeding 802.3at Type 2 & Hi-PoE)
Max. consumption	30W (non-PoE models) 320W (PoE models)*
Power connector	Terminal block

* The power consumption includes the full PoE+ load (240W); that may be limited via configuration.

Environmental Specifications

Operating temp.	-40°C to 75°C (-40°F to 167°F)
Storage temp.	-40°C to 85°C (-40°F to 185°F)
Operating humidity	5% to 95% non-condensing
Storage humidity	5% to 95% non-condensing

Environmental Compliance

RoHS
China RoHS
WEEE

Physical Characteristics

Dimensions (W x D x H)	14.6 cm x 12.7 cm x 15.2 cm (6.25 in x 5.28 in x 3.74 in)
Weight	2.0 kg (4.5 lb)
Enclosure	Aluminum shell
Protection class	IP30 – IP31 with additional cover tool
Installation	DIN rail or wall mount

Standards and Protocols

AlliedWare Plus Operating System

Version 5.4.6

Authentication

RFC 1321	MD5 Message-Digest algorithm
RFC 1828	IP authentication using keyed MD5

Encryption

FIPS 180-1	Secure Hash standard (SHA-1)
FIPS 186	Digital signature standard (RSA)
FIPS 46-3	Data Encryption Standard (DES and 3DES)

Ethernet Standards

IEEE 802.1AX	Link aggregation (static and LACP)
IEEE 802.2	Logical Link Control (LLC)
IEEE 802.3	Ethernet
IEEE 802.3ad	Static and dynamic link aggregation
IEEE 802.3af	Power over Ethernet (PoE)
IEEE 802.3at	Power over Ethernet plus (PoE+)
IEEE 802.3az	Energy Efficient Ethernet (EEE)
IEEE 802.3u	100BASE-X
IEEE 802.3x	Flow control - full-duplex operation
IEEE 802.3z	1000BASE-X

IPv4 Standards

RFC 791	Internet Protocol (IP)
RFC 792	Internet Control Message Protocol (ICMP)

RFC 826	Address Resolution Protocol (ARP)
RFC 894	Standard for the transmission of IP datagrams over Ethernet networks
RFC 919	Broadcasting Internet datagrams
RFC 922	Broadcasting Internet datagrams in the presence of subnets
RFC 932	Subnetwork addressing scheme
RFC 950	Internet standard subnetting procedure
RFC 951	Bootstrap Protocol (BootP)
RFC 1027	Proxy ARP
RFC 1042	Standard for the transmission of IP datagrams over IEEE 802 networks
RFC 1071	Computing the Internet checksum
RFC 1122	Internet host requirements
RFC 1191	Path MTU discovery
RFC 1256	ICMP router discovery messages
RFC 1518	An architecture for IP address allocation with CIDR
RFC 1519	Classless Inter-Domain Routing (CIDR)
RFC 1542	Clarifications and extensions for BootP
RFC 1812	Requirements for IPv4 routers
RFC 1918	IP addressing

IPv6 Standards

RFC 1981	Path MTU discovery for IPv6
RFC 2460	IPv6 specification
RFC 2464	Transmission of IPv6 packets over Ethernet networks
RFC 3484	Default address selection for IPv6
RFC 3596	DNS extensions to support IPv6
RFC 4007	IPv6 scoped address architecture
RFC 4193	Unique local IPv6 unicast addresses
RFC 4291	IPv6 addressing architecture
RFC 4443	Internet Control Message Protocol (ICMPv6)
RFC 4861	Neighbor discovery for IPv6
RFC 4862	IPv6 Stateless Address Auto-Configuration (SLAAC)
RFC 5014	IPv6 socket API for source address selection
RFC 5095	Deprecation of type 0 routing headers in IPv6
RFC 5175	IPv6 Router Advertisement (RA) flags option
RFC 6105	IPv6 Router Advertisement (RA) guard

Management

AMF MIB and SNMP traps	
AT Enterprise MIB	
Optical DDM MIB	
SNMPv1, v2c and v3	
IEEE 802.1AB	Link Layer Discovery Protocol (LLDP)
